SETS

PROLONG THE LIFE OF YOUR BEARINGS!

Need to replace a cup and cone in a critical piece of equipment? Looking to minimise downtime for repairs?

The best way to minimise downtime and ensure that equipment keeps running smoothly is to replace both parts of the bearing: the cup and the cone as a set.

You may think that replacing only the damaged or more accessible part of the bearing is a fast, economical way to solve a repair problem. However, replacing cups and cones together will increase equipment performance and the life of the bearings. This means reduced downtime and lower maintenance costs.

The cup and cone should always be replaced together.

Timken now offers an expanded range of bearing sets for various automotive and industrial applications. See over page for a list of part numbers available as Timken sets.

- Reduce inventory shelf space and unit-piece handling
- Simplify ordering
- Increase customer satisfaction
- Prolong bearing life
- Reduced costs

But what else would you expect from Timken – the world leaders in tapered roller bearings?

- The company with the largest range
- The company with the widest choice
- The company that invented the tapered roller bearing
- The company with 100 years of product knowledge behind it

That's the total commitment of Timken – dedicated to keeping you rolling.
